***SWINE CONFINEMENT FACILITY LICENSURE INFORMATION**

When calculating the numbers of swine in a facility, any swine weighing more than 55 pounds are considered an individual head of livestock. To comply with the National Pseudorabies Eradication Program, swine feedlot operations are categorized by one of the following types.

If your feedlot operation includes swine, please circle the following operational category that best fits your facility.

KSW-1 Breeding Herd Facility

All swine six months of age and older which are maintained for breeding purposes and kept isolated from all other swine except their progeny weighing less than 55 pounds.

KSW-2 Finishing Facility

A facility that is authorized to purchase, grow and/or finish swine originating from Kansas not known to be infected with pseudorabies. Swine originating from outside Kansas must originate from a pseudorabies monitored or pseudorabies qualified free herd, and are subject to approval of the Kansas Livestock Commissioner. Swine may move from this facility direct to slaughter only.
